# Play the Summer Reading Game June 16 - Sept 3, 2017

## The boy who harnessed the wind

by William Kamkwamba

William is a real person who grew up in a Malawian village. Too poor to continue in school, but with a talent for making things, William resolves one day to build a windmill -- a machine that could keep his family from starving again.

## The slowest book ever

by April Pulley Sayre

A book which savors all things slow in the scientific world explores subjects ranging from nature and geology to art and outer space.

## Albert Einstein and relativity for kids : his life and ideas with 21 activities and thought experiments

by Jerome Pohlen

Albert Einstein had rock-star status in his day and his theories led to everyday inventions like television! Find out how to calculate the speed of light with a chocolate bar, replicate the expanding universe in a microwave oven, and do your own thought experiments in this book for inquisitive minds.

## Origami games

by Joe Fullman

Offers step-by-step instructions for origami projects to be used in games, including dominoes, a fortune teller, and dice.

## Incredible snack package science

by Tammy Enz

In this book, you will learn how to use snack packages in projects that demonstrate scientific principles. Make a speaker for your cellphone or tablet, shake up icecream in this speedy cooler, and more!
